

GCN1000
PCPortal

The GCN1000 provides remote access to a computer or compatible KVM switch**, allowing you to control or monitor it from literally anywhere in the world. An internet connection, a browser, and the current IP address of your router are all that is required.

The unit is completely hardware-based, eliminating the need for a working operating system on the local computer in order to function. Communication between the GCN1000 and the remote computer takes place over a network (or the internet). This makes the GCN1000 ideal for remote file transfer, or troubleshooting computers that do not boot properly, for changing BIOS settings, or for selecting an operating system in a multiple-boot situation. After connecting to a remote computer with the GCN1000, performing tasks on the remote computer is virtually identical to sitting at the machine itself.

- Control or monitor your home or office PC from literally anywhere in the world via a LAN, a WAN, or the Internet
- Hardware-based solution allows BIOS level control for remote troubleshooting
- Remote access via browser makes it very easy to operate
- Authentication and SSL 128bit encryption guarantees security and protection
- USB 2.0 virtual media port allows file transfer between local and remote computer
- Control multiple computers by connecting to a USB KVM switch**
- Firmware upgradeable

** GCN1000 works with limited IOGEAR KVMs: GCS1802, GCS1804, GCS1808, GCS1716

Requirements

- Network connection
- Internet connection (to allow access from outside your LAN or WAN)
- An Ethernet Router
- PCPortal (GCN1000)
- USB Computer or KVM connected to your network
- USB Keyboard and mouse

Package Contents

- 1 x PCPortal (GCN1000)
- 1 x Manual
- 1 x Power adapter
- 1 x 2L-5202U custom USB cable
- 1 x LIN5-18X4-U22G custom console cable
- 1 x Ethernet cable (6ft.)

Specifications
