

GCS942UW6

Hybrid DVI-D KVM with cables and audio

IOGEAR's new GCS942UW6 DVI-D Hybrid KVM addresses the problem of connecting a USB mouse and PS/2 keyboard to a KVM. No longer do you need to give up your favorite keyboard or mouse to accommodate a PS/2 or USB only KVM – this is the best of both worlds.

In addition to the hybrid connections you can share your desktop speakers and microphone between both computers, plus have the ability to switch them independently from KVM functions. You can make an internet call from one computer while working on a spreadsheet on another computer without skipping a beat.

The GCS942UW6 has a selectable rate Auto scan mode to allow hands-off monitoring of your computers which is perfect for the times when you have processes running on both computers, and want to monitor their progress, i.e. a virus scan on one and a disk defragmenting.

- Hybrid connections for USB mouse and PS/2 keyboard
- Hot key or manual switching
- Independent Audio switching (hot key only)
- Asymmetric cable lengths
- DVI-D video resolution up to 1920 x 1200, DDC2B

Requirements

Package Contents

Console

- PS/2 keyboard
- USB mouse
- Powered desktop speakers and microphone (optional)
- A monitor that accepts digital signals

- 1 x GCS942UW6 KVM
- 1 x Remote switch
- 1 x User Guide
- 1 x Registration card

Computers

- PS/2 keyboard port
- USB type A port
- DVI-D Video output

Specifications

Function	GCS942UW6	Dimensions	GCS942UW6
