

GKBSR201

## 104-Key Keyboard w/Built-in Common Access Card Reader

### CAC Reader Keyboard / Smart Card Reader Keyboard

IOGEAR's GKBSR201 104-Key Keyboard with Integrated Smart Card Reader is a secure terminal for computer users in hospitals, education, banking or even at home. A Smart Card is the shape of a credit card, however it is embedded with a chip that can process data, and permit access to delegated computer systems. Smart Cards are often programmed with a PIN number to ensure security for both the card holder and the system they want to access.

GKBSR201's card reader uses a contact system which is less prone to misaligning your card when it is inserted, eliminating the possibility of it being misread. Smart Cards are the next generation of secure and user friendly identification, authentication, and data storage solutions. The IOGEAR GKBSR201 is an efficient and accurate Smart Card reader solution. The keyboard with the integrated card reader solution will help minimize the clutter of an external, free-standing card reading device on your desk.

\*\*\*The FIPS 201 Evaluation Program removed LACS Transparent Readers from the Approved Products list. See link for more details.
