

GKBSR201TAA

Keyboard w/ Built-in Common Access Card Reader (TAA Compliant)

CAC Reader Keyboard / Smart Card Reader Keyboard

The GKBSR201 is a TAA compliant 104-Key Keyboard with Integrated Common Access Card Reader is a secure terminal for computer users in government* agencies, federal contractors, hospitals, education, banking or even at home. Commonly referred to as a Smart Card, the Common Access Card (or CAC) is the shape of a credit card, however it is embedded with a chip that can process data, and permit access to delegated computer systems. Smart Cards are often programmed with a PIN to ensure security for both the card holder and the system they want to access.

GKBSR201's card reader uses a contact system which is less prone to misaligning your card when it is inserted, eliminating the possibility of it being misread. Smart Cards are the next generation of secure access and provide user friendly identification, authentication, and data storage solutions. The IOGEAR GKBSR201 is an efficient and accurate Smart Card reader solution. This keyboard with built-in Smart Card reader solution will help minimize the clutter of an external, free-standing card reading device on your desk.

*The GKBSR201 Keyboard with Integrated Common Access Card Reader is FIPS-201 Certified and TAA Compliant

- Standard full size 104-key keyboard for fast typing
- FIPS-201 Compliant: Meets US Federal Information Processing Standard Publication 201
