Phaser Mouse

PHASER- IOGEAR's hand-held RF wireless mouse is the perfect tool for making presentations, it gives you the freedom to walk around the room and not be bound to the computer. The Radio Wave technology allows this mouse to work at any location and from any direction; there is no need to point the mouse toward the computer or sensors. The thumb-operated track ball and the ergonomic contour make cursor movement easy and comfortable. The second left-click button allows you to trigger instead of clicking the mouse. The built-in laser pointer helps you to direct the audience's attention to where you want it. This device is USB compatible, it also allow multiple units operating in the same room without interfering with each other. It is also backed by IOGEAR's 3 Year Limited Warranty. "The interesting built-in laser pointer when combined with the built-in trackball make for a powerful, integrated presentation pointing device... What sets this pointer apart from other similar products is the built in RF radio... A wonderful thing about the Phaser is the fact that you can connect multiple devices to the same base. It's a wonderful way to allow multiple speakers access to your presentation." - Ronny Ko, Bityard, <http://www.bityard.com/article.php?sid=474>

- Ideal for making presentation
- Control your computer from up to 50' away with no wires
